

# LIFT & ROTATE

## WITH MANUAL ROTATION

Allows for vertical lifting of pallet and manual rotation.

### Features:

- Robust Lift and Rotate Unit that allows for product to be lifted off conveyor, and rotated 90 degrees.
- Provides operator improved access to product.
- Manual rotation allows for operator to rotate product without controls.
- Rotation lock to secure pallet in position at the end of a rotation cycle.

### Options:

- Dual acting air cylinder with clamping device to secure device in case of loss of air pressure.
- Robust slewing bearing for rotation ensures smooth and easy operation.
- Can be designed for various rotation angles or freely spinning.
