

RACK FEEDER

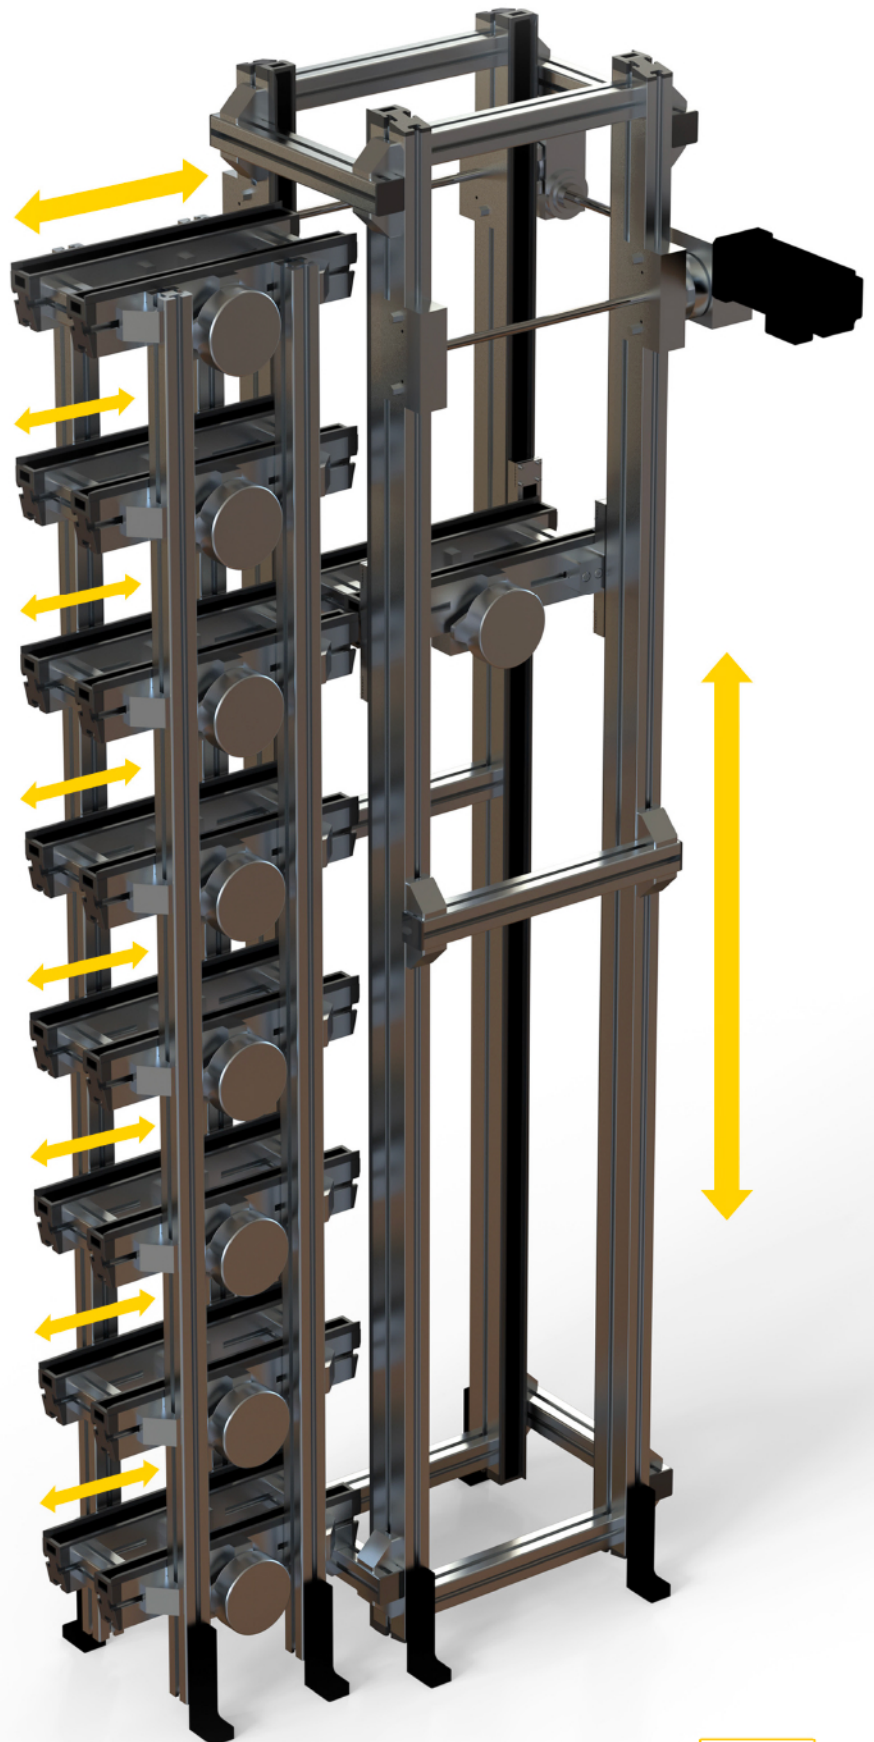

Allows for vertical transfer of product to be stored on multiple independently-driven stacked conveyors.

Features:

- A Vertical Transfer Unit feeds product to a rack of independently driven conveyors.
- Maximum amount of product can be stored in a small footprint.
- Independently driven stacked conveyors allow for quick storage and retrieval processes to decrease cycle time.
- Servo-driven elevator allows precision movement and stoppage to multiple positions.

Options:

- Can be driven with an electric motor – stepper / servo.
- Quantity of transport deck conveyors can be added as needed.
- Complete flexibility of overall geometry.
